Calculator Instructions for Evaluating a Function

Evaluating a function:
Inevitably you will want to evaluate a complex expression for several different values of x. You can use a TABLE if they are close to each other or you can do the following. Enter your equation in the Y= editor (1), then press \textit{VARS} (2), right arrow over to Y-VARS and \textit{ENTER} (3), and with the cursor on Y1 press \textit{ENTER} . On the homescreen, type (#) after the Y1 where you insert the # of your choice and then press \textit{ENTER} (4).
