

**CSM Bio 250 Anatomy**  
**Skeletal System Lab Guide**

**HISTOLOGY – ID the following in the slides  
or on model**

compact bone -haversian systems (osteons),  
Haversian (central) canal, concentric lamellae,  
interstitial lamellae, osteocytes, lacunae,  
canalliculi, perforating (Volksmanns) canals  
spongy bone - trabeculae

**Know all bones articulated and disarticulated  
except hands and feet, bones that will only be  
seen articulated. Also know right from left  
where appropriate.**

**AXIAL SKELETON**

**Skull**

frontal bone  
    frontal sinus

occipital bone  
    foramen magnum  
    occipital condyle and atlanto-occipital joint

sphenoid bone  
    sella turcica  
    optic foramen/canal  
    sphenoidal sinus

ethmoid bone  
    crista galli  
    cribriform plate  
    superior and middle conchae  
    perpendic. plate(nasal septum)  
    ethmoidal sinus

temporal bones  
    carotid canal  
    petrous portion  
    internal auditory meatus  
    external auditory meatus  
    jugular foramen  
    mandibular fossa  
    (temporomandibular joint)

mastoid process

parietal bones

mandible

body

angle

coronoid process

condyloid process

(mandibular condyle)

alveolar process

maxillae

alveolar process

maxillary sinus

palatine process

zygomatic bones

nasal bones

vomer

inferior nasal conchae

lacrimal bones

palatine bones

**Cranial Structures**

sutures:

-coronal suture

-sagittal suture

-lambdoidal suture

-squamosal suture

paranasal sinuses

zygomatic arch

orbit

supraorbital margin

superior orbital fissure

inferior orbital fissure

optic canal

anterior cranial fossa  
middle cranial fossa  
posterior cranial fossa

#### Skull of Newborn

-anterior/frontal fontanel and others

hyoid bone

ear ossicles  
malleus  
incus  
stapes

#### Vertebral Column

typical vertebra

body (with intervertebral disc)  
spinous process  
transverse process  
vertebral foramen  
superior articular process and facet  
inferior articular process and facet

cervical vertebrae

transverse foramen (cervical only)

atlas - lacks a body

-anterior arch w/ fovea dentis  
-lateral mass with superior and inferior  
articular processes

axis

-dens/odontoid process

atlanto-axial joint

thoracic vertebrae  
costal facets

lumbar vertebrae

intervertebral joints between bodies  
intervertebral joints between articular facets

sacrum

-superior articular process and  
facet  
-median crest  
-lateral mass with auricular surface for  
articulation with ilium  
-pelvic surface with foramina  
-dorsal surface with foramina  
-sacral canal

#### 7. coccyx

curves of the spine, scoliosis, kyphosis, lordosis

#### Ribs

##### Typical

head with facets or demifacets  
neck  
tubercle with articular facet  
angle  
costal groove

##### Atypical

###### 1. First and second rib

-head with one articular facet  
-prominent and thick tubercle  
-no angle  
-no costal groove

###### 2. Eleventh and twelfth/floating ribs

-head with one articular facet  
-no neck or tubercle  
-costal groove shallow or  
nonexistent

intercostal space  
vertebrocostal joints

#### sternum

costal cartilage  
manubrium  
sternal angle  
body of sternum  
xiphoid process  
sternocostal joints

## APPENDICULAR SKELETON

### Pelvic Girdle

symphysis pubis  
greater/false pelvis  
lesser/true pelvis

os coxa (ossa coxae pl.)  
acetabulum (for hip joint)  
obturator foramen  
ilium  
    iliac crest  
    auricular surface  
ischium  
    ischial tuberosity  
    ischial spine  
pubis

sacroiliac joint  
sex differences in pelvis – pubic arch

clavicle  
    acromial end  
    sternal end  
sternoclavicular joint  
acromioclavicular joint

scapula  
    spine  
    supraspinous fossa  
    infraspinous fossa  
    glenoid cavity/fossa  
shoulder joint  
coracoid process  
subscapular fossa  
(supra)scapular notch  
acromial process/acromion

humerus  
    head  
    shaft  
anatomical neck  
surgical neck  
greater tubercle  
lesser tubercle  
deltoid tuberosity

nutrient foramen  
capitulum  
trochlea  
medial epicondyle  
lateral epicondyle  
coronoid fossa  
olecranon fossa

ulna  
    semilunar/trochlear notch  
    coronoid process  
    olecranon process  
    radial notch and radioulnar joint  
    interosseous crest/border  
    head  
    styloid process

radius  
    Shaft/diaphysis  
    Head and radioulnar joint  
    Radiohumoral joint  
    radial tuberosity  
    styloid process  
    ulnar notch

elbow joint  
wrist joint

carpals: intercarpal joints  
navicular/scaphoid  
lunate  
triquetral  
pisiform  
trapezium  
trapezoid  
capitate  
hamate

metacarpals, carpometacarpal joint of thumb

phalanges - distal, middle, proximal  
interphalangeal joints

femur  
    head and hip joint  
    fovea capitis

neck	arches of feet
shaft	longitudinal – medial and lateral
greater trochanter	transverse
lesser trochanter	
medial condyle	
lateral condyle	
intercondylar fossa	
patellar surface	
medial epicondyle	
lateral epicondyles	
patella and patellar-femoral joint	
knee joint	
tibia	
medial condyle	
lateral condyle	
intercondylar eminence	
tibial tuberosity	
anterior crest	
medial malleolus	
fibular notch	
fibula	
head	
lateral malleolus	
<u>Ankle and Foot</u>	
ankle joint	
tarsals:	
talus	
calcaneus	
tuberosity of calcaneus	
navicular	
first/medial cuneiform	
second/intermediate cuneiform	
third/lateral cuneiform	
cuboid	
metatarsals	
phalanges
